John D. Salisbury

Principal Product Designer

Complex B2B platforms, design systems and AI-native workflows

Fallbrook, CA & Washington, DC
johnsalisbury5@gmail.com

SUMMARY

Principal product designer with 20 years turning complex, data-heavy workflows into clear, buildable products across enterprise health data, payments, fintech and consumer devices. At Truveta I design the ML-powered tools and research platform behind de-identified records on 130M+ patients. Earlier I led UX and the cross-platform design language for Verifone's payment terminals, built a UX practice from the ground up at MPE, and shipped first-of-their-kind interfaces at Sony and Kyocera. I work hands-on with AI: prototyping in code with Claude Code and Codex, and building AI context into the design process itself. Named inventor on 9 U.S. patents and applications; Sony Presidential Award recipient.

EXPERIENCE

Truveta · Principal Product Designer — Aug 2022–present · Remote (Seattle, WA)

Health-data and AI/ML platform with de-identified records on 130M+ U.S. patients, used by life-sciences companies and health systems.

- **Clinical notes annotation tool:** designed the tool annotators use to label unstructured clinical notes, producing the training data that teaches ML models to extract structured information across a corpus of 5B+ clinical notes.
- **Data ingestion and de-identification tooling:** designed internal tooling to reformat and de-identify very large volumes of patient records, configure downstream transforms, and search across the data. This pipeline turns raw health records into Truveta's research-ready customer product.
- **Truveta Studio:** designed the researcher-facing platform where scientists and researchers access Truveta data and conduct studies.
- **Advanced concepts:** lead exploratory design for next-generation research experiences built on conversational AI and voice-driven interaction.
- Built a reusable AI design-context system around six researcher archetypes, used with Figma Make, so concepts are pressure-tested against synthetic users before formal research; prototype interactions directly in code with Claude Code and Codex.

John Salisbury Design · Founder & Principal Designer — 2018–present

Independent design practice: selective consulting for healthcare, AI and hardware clients alongside full-time roles.

- **Newman** (AI mental-health coach, pre-launch), Nov 2025–Summer 2026: lead designer for a men's mental-health and accountability app built around a conversational AI video avatar on Tavus. Designed the conversational AI coach experience and app UI; advised the CEO on platform selection, HIPAA/BAA requirements, and scaling the vendor relationship.
- **Alcon:** designed UX/UI for diagnostic tools.
- **BioFire** (Salt Lake City): designed internal applications for the Salt Lake City division.
- **RAB Lighting:** redesigned the LightCloud lighting-control app concepts, simplifying a system setup that customers typically handed back to RAB staff.

MPE Inc. · Principal UX Designer · Senior UX Designer — 2018–2022 · Carlsbad, CA

Medical product design consultancy.

- Co-founded and led the UX practice, growing it to five full-time designers and two contract designers.
- Designed the tablet UX/UI for a molecular infectious-disease diagnostic device; prototyped key workflows, observed usability testing, and iterated on the results.
- Led client pitches, proposals, and design presentations; partnered with clients' internal and external software teams through delivery.
- Clients included BioFire, Medtronic, Cepheid, Vektor Medical, and Percussionaire.

Verifone · Senior Interaction Designer — 2016–2018 · San Diego, CA

- Led UX for new payment-terminal products across device and web, bringing a formal UX process to an engineering-centric company facing nimble competitors like Square.
- Led the cross-department design language initiative for device and web; conceptualized interfaces for future devices and R&D.
- Integrated and mentored three designers into the formal design team; managed outside agencies and international development centers.

Intuit · Senior Experience Designer (Contract) — 2014–2015

- Designed demographically targeted responsive marketing sites and interactive infographics within an agile team.

Tactel US / Room 5 · Experience Design Manager · Creative Director — 2010, 2013–2014 · San Diego & San Francisco

- Directed all UX/UI work by internal and contract designers across two offices; led client pitches with business development.
- Led concept development for Walmart Labs, Qualcomm, and Intel; designed the interface for a DARPA Android field app.
- Designed the photo-sharing app that won the education category of Qualcomm's Uplinq Hackathon; led the US division's rebrand.

Craftlab Design · Founder & Principal Designer — 2011–2013

Design consultancy with a bench of five freelance designers and developers; GreatCall's outside R&D design partner.

- **GreatCall:** designed the Android home screen for Jitterbug Touch 1 & 2 and the Live Nurse and Link apps; conceived patented interactions; pitched R&D concepts to senior management.
- Directed design for an Altec Lansing music product and a Panasonic interactive project, managing the designer and Flash developer.
- Designed social apps for VH1 and MTV, the Colgate mobile site, and early in-car interface concepts for Microsoft; created design pitches for Icon Mobile (Los Angeles) clients including Huawei.

Kyocera Wireless · Senior UX Designer · UI Designer — 2005–2007, 2008–2010 · San Diego, CA

- Led UX for Kyocera's first Android touchscreen smartphone and the Rio touchscreen phone, gaining approval from US and Japanese executives and carriers.
- Patented concept devices built around social media; overhauled sound design across the device line.
- Created UI style guides and carrier customizations for Boost and Virgin Mobile; worked with teams in Japan, India, and Russia.

Sony Electronics · Senior UX Designer 2007–2008 · San Diego, CA

- Led UX for the North American Bravia TV line, working with Sony Global Design; the work was adopted globally by other teams.
- Earned the Sony Presidential Award and multiple patents.

CORE SKILLS

Product design
Complex B2B and enterprise workflows, end-to-end ownership from research and wireframes through high-fidelity prototypes and QA, design systems and reusable primitives, data visualization, usability testing

AI-native practice
Hands-on prototyping in code (Claude Code, Codex, React, Vercel), human-in-the-loop ML and annotation workflows, conversational and voice UI, AI video-avatar experiences, synthetic-persona design validation

Leadership
Building and mentoring design teams, design reviews, executive storytelling and client pitches, close partnership with engineering, product and data science

Tools
Figma, Figma Make, Claude Code, Codex, React, ElevenLabs, Tavus, Processing, Adobe Creative Cloud

PATENTS

US 8,144,251 Overlaid images on TV

US 8,151,215 Favorite GUI for TV

US D593,577 TV display with graphical user interface for TV favorites

US 8,862,106 Intelligent call forwarding

US 9,659,261 User interface for portable device

US D763,880 Display screen with graphical user interface

US 2009/0262257 Background TV (application)

US 2011/0227810 Portable communication device with secondary peripheral display (application)

US 2008/0204412 User interface navigation mechanism and method (application)

AWARDS & RECOGNITION

- Sony Presidential Award: TVOA President's Special Recognition, FY2007, for a digital TV platform with a 3D graphical user interface
- IDEA 2010 Honorable Mention (Ecodesign) and ID Annual Design Review Finalist for the EOS concept, featured in Taschen's *Product Design in the Sustainable Era*
- Kyocera Golden Key Award
- Qualcomm Uplinq Hackathon winner, education category

EDUCATION & MENTORING

- UC San Diego Extension: Interaction Design
- Palomar College: coursework in graphic design
- Design mentor, CareerFoundry (2018–2023): mentored 200+ UX/UI students through coursework, critique and career entry
